

# Up to 67% government grants available for earthquake-prone heritage buildings

## *Funding and advice to earthquake strengthen heritage buildings*

Heritage EQUIP is the government programme supporting seismic upgrades for New Zealand's earthquake-prone heritage buildings. We make funding available to private building owners, and upgrade guidance is available to all online at [heritagequip.govt.nz](https://heritagequip.govt.nz)

### Heritage EQUIP is now providing even more assistance in the regions:

- Up to 67% funding to support seismic upgrade works
- Grants now also available for **professional advice**
- Extra incentives are available for multiple building applications.

There's also extra funding available if the proposal **builds technical capacity in regional New Zealand**.

We're actively seeking proposals from eligible entities working on behalf of groups of building owners, to aggregate multiple buildings into a single professional advice or upgrade works funding application.

### Entities we can fund for multiple building proposals include:

- Professional advisers like structural engineers, heritage consultants and conservation architects
- Heritage trusts and town centre or heritage-focused charitable entities
- Territorial authorities

Grants for professional advice, and grants for multiple buildings, are only available for regional projects in medium or high seismic risk areas.
