

NATURAL ENVIRONMENT VALUES

Natural features and landscapes

Overview

This chapter contains the provisions relating to outstanding natural landscapes, outstanding natural features, landscapes of high amenity value and the karst overlay. The Act requires the plan to protect outstanding natural features and landscapes in the district from adverse effects, including cumulative effects arising from inappropriate subdivision, use and development. [Where natural features and landscapes are located in the coastal environment, this chapter gives effect to the New Zealand Coastal Policy Statement 2010 and the Waikato Regional Policy Statement by identifying these areas and providing policy direction and matters of discretion.](#)

Landscapes, places and features can be of historical, cultural and spiritual significance to mana whenua. For mana whenua, it is critical to manage and protect these resources in order to fulfil the obligation of kaitiakitanga or guardianship. Wider landscape settings symbolise life and the narratives of the local tribal guardians, as well as providing a tangible connection to ancestors, whenua and significant historical events. Landmarks and discrete features can carry deep levels of meaning and association. These settings are valued for their holistic connection to the local tribal custodians as a collective, through the generations.

It is the view of mana whenua that specific values of significance and associative narratives should not be recorded in respect of the landscapes and features identified in this chapter. Mana whenua representatives acknowledge the contemporary relationships that exists between local tribal custodians and these landscapes and features. This includes valuing customary resources and appreciating these areas for their naturalness, solitude and recreational opportunities. However, the role and obligation of kaitiakitanga precludes sharing the symbolism, values and significance of these sites. The narratives are sacred representations of these natural resources and therefore are taonga because they express through the physical manifestation of a place, the relationship of the local tribal custodians with the intangible.

Outstanding natural landscapes

Landscapes are considered outstanding when they meet assessment criteria associated with factors including aesthetic values, expressiveness and legibility, transient and cultural values, historical association and natural science factors. Both the Waikato Regional Policy Statement and the Manawatū Whanganui One Plan contain assessment criteria and guidance which have been used to identify the outstanding natural landscapes that are protected by the provisions in this plan. Approximately 21% or around 73,000 hectares of the district is identified as an outstanding natural landscape. Of this area, 51% is held as Department of Conservation estate, QEII covenant or Nga Whenua Rahui. Where the land is held in private ownership, the majority is identified as a significant natural area. Only 11% of the land identified as part of an outstanding natural landscape is developed or farmed. Of particular note are the rugged, peaked landforms of the northern Herangi range

which are considered to be an outstanding natural landscape at both a regional and a district scale. The five outstanding natural landscapes are:

- Herangi-Pomarangai
- Northern Coastline
- Western Coast
- Rock Peak
- Mokau Hills

Refer to [SCHED7](#) for the schedule of outstanding natural landscapes.

Outstanding natural features

The district plan is required to identify outstanding natural features and avoid in the first instance, any adverse effects of activities that might compromise their unique values and characteristics. 76 sites or features that contribute to the understanding of geology, are rare or unusual, or meet other abiotic and biotic criteria that make them significant are included for protection in this plan. Approximately 2% or around 4,300 hectares of the district is identified as being an outstanding natural feature. There are six categories of outstanding natural features and provisions apply according to their type. The majority of outstanding natural features are contained or small features such as waterfalls, natural bridges, bluffs, tors, gorges, lakes, sandspits and areas of geological importance. Categories A and F are larger areas with characteristics similar to the outstanding natural landscapes:

- A = Large landforms (non-coastal).
- B = Smaller more fragile landforms.
- C = Dynamic landforms and features in the coastal zone.
- D = Robust exposures of geological material (non-coastal).
- E = Fragile exposures of geological material (mostly in coastal zone).
- F = Caves.

Refer to [SCHED8](#) for the schedule of outstanding natural features

Landscapes of high amenity value

Landscapes of high amenity value are identified in the part of the district that is within the Waikato region. The Waikato Regional Policy Statement requires district plans to identify and appropriately recognise the qualities and characteristics of areas of amenity value. These landscapes are managed to maintain and enhance their rural character and naturalness while allowing for appropriate development, particularly the ongoing use of rural land for agricultural, pastoral and horticultural activities. Consequently, a working pastoral landscape is envisaged for these areas and the provisions heavily rely on the underlying general rural zone to manage the effects of non-farming activities including rural industry, quarrying activities and tourism. Approximately 23% or around 82,000 hectares comprise the four landscapes of high amenity value in the district:

- Awakino gorge
- Limestone country
- Rangitoto range and the Waipa valley
- Kawhia harbour

Refer to [SCHED9](#) for the schedule of landscapes of high amenity value.

The karst overlay

The karst overlay contains subterranean caves and catchment areas of high geomorphological and ecological diversity. The majority of these cave systems were identified and protected through provisions in the previous district plan. This plan seeks to manage the main impacts on karst ecosystems which are associated with general vegetation clearance which can impact the hydrology of cave systems and localised vegetation clearance around karst features which can change the environmental conditions in caves with resulting changes to biota. Plantation forestry can cause significant sediment flows to subterranean habitats during harvesting and quarrying activities, dumping of waste or filling of cave entrances, tomos and dolines can also have a serious detrimental effect on karst ecosystems. 5 catchment systems and 31 cave systems comprising approximately 5% or around 17,000 hectares of the district are identified in the karst overlay.

Refer to [SCHED12](#) for the karst overlay schedule.

Objectives and Policies - Outstanding natural features and landscapes

Refer also to the relevant objectives and policies in Part 2 District - Wide Matters and Part 3 - Area Specific Matters

- NFL-O1.** The values and character of the outstanding natural features and outstanding natural landscapes identified in SCHED7 and SCHED8 are recognised and protected from inappropriate subdivision, use and development.
- NFL-O2.** Ensure that the cultural and spiritual relationships of Māori with outstanding natural features and outstanding natural landscapes are appropriately considered as part of subdivision, use and development activities.
- NFL-O3.** Provide for identified activities assessed in this plan as appropriate within outstanding natural features and outstanding natural landscapes.
- NFL-P1.** Ensure the values and character of the outstanding natural features and outstanding natural landscapes are protected from inappropriate subdivision, use and development by:
 - 1. Avoiding adverse effects which compromise the values and character of outstanding natural features and landscapes; and
 - 2. Ensuring the location, scale, materials, design, colour and grouping of buildings, structures and infrastructure avoid adverse effects on the values and character of outstanding natural features and landscapes; and
 - 3. Ensuring earthworks integrate with the existing landform to preserve the values and character of outstanding natural features and landscapes; and

4. Avoiding any activity, particularly earthworks, harvesting of plantation forestry and structures, where this will adversely affect caves and fragile outstanding natural features identified in [SCHED8](#); and
5. Ensuring developments in locations that are of significance to mana whenua appropriately assess those effects and any resulting development is managed in a way that protects the values of the site; and
6. Avoiding in the first instance or minimising the removal of indigenous vegetation; and
7. Ensuring any earthworks or vegetation removal activities focus on protecting existing indigenous vegetation in the first instance, minimising clearance in the second instance and undertaking any measures necessary to rehabilitate the land including restoration and re-planting as a final resort; and
8. Avoiding the adverse effects of mineral extraction activities in outstanding natural landscapes; and
9. Providing for plantation forestry only where there is a clear and on-going land stability benefit and the ensuing operations avoid detracting from the values and character of outstanding natural features and landscapes; and
10. Providing for the continued operation of lawfully established farming activities.

NFL-P2. Provide flexibility when considering the development of land returned under Te Tiriti o Waitangi settlements and multiple owned Māori land located in outstanding natural features and outstanding natural landscapes by:

1. Evaluating the extent to which the development enables the relationship of mana whenua with their ancestral lands and the exercise of kaitiakitanga; and
2. Evaluating the extent to which positive economic, social and cultural benefits are achieved for mana whenua now and into the future; and
3. Taking into account the requirement to avoid adverse effects on the values and character of outstanding natural features and landscapes.

NFL-P3. Provide for the appropriate use of natural resources, including land and water, within outstanding natural features and outstanding natural landscapes by:

1. Providing thresholds to allow limited earthworks and vegetation removal, particularly where this is part of the continued operation of lawfully farming established activities; and
2. Ensuring buildings and structures are setback from riparian and coastal margins and do not dominate ridgelines or coastal headlands.

Objective and Policy - Landscapes of high amenity value

Refer also to the relevant objectives and policies in Part 2 District - Wide Matters and Part 3 - Area Specific Matters

NFL-O4. Recognise, maintain, and where practicable, enhance the qualities and values of the landscapes of high amenity value identified in [SCHED9](#), including those values associated with working agricultural, pastoral and horticultural landscapes.

NFL-P4. Maintain and where practicable, enhance the qualities and values of the landscapes of high amenity value during subdivision, land use and development by:

1. Ensuring that the effects of any activity which could compromise the qualities and values of the landscapes of high amenity value are minimised; and
2. Ensuring that buildings, structures and infrastructure are integrated into landscapes of high amenity value to minimise, to the maximum extent practicable, any visual impacts; and
3. Managing the adverse effects of earthworks for buildings, driveways, new tracks and farm quarries through appropriate subdivision and development design; and
4. Ensuring developments in locations that are of significance to mana whenua appropriately assess those effects and any resulting development is managed in a way that protects the values of the site; and
5. Minimising the removal of indigenous vegetation as far as practicable; and
- ~~6. Providing for the continued operation of lawfully established farming activities.; and~~
- ~~7. Providing for the continued operation, maintenance and repair of lawfully established renewable electricity generation activities.~~

NFL-PX. Maintain and where practicable, enhance the qualities and values of the landscapes of high amenity value, while providing for:

1. The continued operation, maintenance and repair and minor upgrading of lawfully established renewable electricity generation activities; and
2. Nationally and regionally significant infrastructure and industry, and for those activities associated with significant mineral resources; and
3. The recognition of the positive benefits of new renewable electricity generation activities.

Objective and Policy - The karst overlay

Refer also to the relevant objectives and policies in Part 2 District - Wide Matters and Part 3 - Area Specific Matters

- NFL-O5.** Ensure the unique geomorphological, hydrological and ecological values of the karst overlay identified in [SCHED12](#) are recognised and protected.
- NFL-P5.** Recognise, protect, and where practicable, enhance the values of the karst overlay by:
1. Ensuring that the effects of any activity which could compromise the values of the karst overlay are avoided in the first instance, and where this is not practicable, minimised; and
 2. Managing the adverse effects of earthworks through appropriate development design, mitigation measures and rehabilitation; and
 3. Avoiding any activity, particularly vegetation clearance and large-scale earthworks including quarrying activities, where these will adversely affect the values of the karst systems or features; and
 4. Avoiding developments in locations that are of significance to mana whenua [to the maximum extent practicable](#); and
 5. Minimising the removal of indigenous vegetation; and
 6. Providing for plantation forestry only where there is a clear and on-going land stability benefit and the ensuing operations do not significantly detract from the values of the karst overlay; and
 7. Providing for the continued operation of lawfully established farming activities; [and](#)
 8. [Providing for the removal of non-significant indigenous vegetation in the rural production zone where the effects of clearance do not adversely affect the values of the karst systems or features.](#)

Rules

The rules that apply to activities in natural features and landscapes are contained in the tables listed below. To undertake any activity, it must comply with all the rules listed in:

- NFL - Table 1 – Activities Rules; and
- NFL - Table 2 – Performance Standards; and
- Any relevant provision in Part 2 District-wide matters; and
- Any relevant provision in Part 3 Area Specific matters.

Where an activity breaches more than one rule, the most restrictive status shall apply to the activity.

[Refer to Part 1 - How the Plan Works](#) for an explanation of how to use this plan, including activity status abbreviations.

Note: *Where an activity is not provided for in this table, see the applicable provisions in the underlying zone or district wide chapter.*

NFL - Table 1 – Activities Rules

Buildings

	The rules apply to all zones	The rules apply to all zones except Te Maika precinct (PREC7)	The rules apply to all zones except the rural production zone & Aria settlement zone	
Rule	Outstanding natural features	Outstanding natural landscapes	Landscapes of high amenity value	Karst overlay

NFL - Table 2 – Performance Standards

NFL-R19.	Continuous cover forestry and/or sustainable forest management/sustainable harvesting	
<p>Activity Status: PER</p> <p>Where:</p> <ol style="list-style-type: none"> The harvesting must be subject to a sustainable forest management plan or permit under Forests Act 1949; and Harvesting must be located at least 10 m from the edge of any water body as measured from the bankfull channel width (see NATC – Figure 1); and Harvesting must not occur within 20 m from the open coast as measured from the toe of the nearest natural bank adjoining the sea, or where that is not able to be defined, from the edge of common terrestrial vegetation. <p><i>Note:</i> See the rules in the ecosystems and indigenous biodiversity chapter if the activity is undertaken within a significant natural area.</p>		<p>Activity status where compliance is not achieved: RDIS</p> <p>Matters over which discretion is restricted:</p> <ol style="list-style-type: none"> The location and extent of the activity and its effects on the feature and wider landscape; and The location of trees to be harvested; and The area of trees to be harvested on an annual basis; and Whether the harvesting activity is setback from coastal or riparian margins; and The extent to which existing vegetation is retained in order to mitigate the effects of streambank and slope erosion, sedimentation, water quality degradation and loss of indigenous species habitat; and The location, timing, design and density of soil disturbance and vegetation removal activities and any rehabilitation measures proposed; and The effects of the activity in respect of riparian margin and bank stability and soil erosion; and Measures to avoid, remedy or mitigate adverse effects of the activity on the outstanding natural feature, karst feature and wider landscape.

NFL-R20.	Plantation forestry afforestation
<p>Activity Status: PER Where:</p> <ol style="list-style-type: none"> 1. In outstanding natural landscapes other than the western coast outstanding natural landscape, the afforestation must not exceed 2 ha of exotic plantation forestry per holding per calendar year; or 2. In the western coast outstanding natural landscape, the afforestation must not exceed 5 ha of exotic plantation forestry per holding per calendar year; <p>AND</p> <p>3. In all outstanding natural landscapes, there is no limit on the amount of indigenous plantation forestry planted per holding per calendar year; and</p> <ol style="list-style-type: none"> 4. Afforestation must be located at least 10 m from the edge of any water body as measured from the bankfull channel width (see NATC – Figure 1); and 5. Afforestation must not occur within 20 m from the open coast as measured from the toe of the nearest natural bank adjoining the sea, or where that is not able to be defined, from the edge of common terrestrial vegetation. <p><i>Note: This rule prevails over the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017.</i></p> <p><i>Note: See the rules in the ecosystems and indigenous biodiversity chapter if the activity is undertaken within a significant natural area.</i></p>	<p>Activity status where compliance is not achieved: RDIS Matters over which discretion is restricted:</p> <ol style="list-style-type: none"> (a) The effects of the location, layout, and extent of planting including the arrangement, distribution and choice of species on landscape values; and (b) Whether the afforestation detracts from the outstanding natural landscape; and (c) Whether the afforestation is setback from riparian and coastal margins; and (d) The extent to which existing vegetation is retained in order to mitigate the effects of streambank and slope erosion, sedimentation, water quality degradation and loss of indigenous species habitat; and (e) The location, timing, design and density of soil disturbance and vegetation removal activities and any rehabilitation measures proposed; and (f) Effects on the relationship of mana whenua and their culture and traditions with the site and any wāhi tapu or other taonga affected by the activity; and (g) The benefits of afforestation in respect of slope stability or preventing exacerbation of any pre-existing deep-seated land instability; and (h) Measures to avoid, remedy or mitigate damage to riparian vegetation or soil; and (i) Measures to avoid, remedy or mitigate the adverse effects of the activity on outstanding natural landscapes.
NFL- R21.	Harvesting of plantation forestry
<p>Activity Status: PER Where:</p> <ol style="list-style-type: none"> 1. In outstanding natural landscapes and in the karst overlay, clear-felling of (exotic or indigenous) plantation forestry must not exceed 2 ha per holding per calendar year; and 2. Replanting must occur within 12 months; and 3. Harvesting must be located at least 10 m from the edge of any water body as measured from the bankfull channel width (see NATC – Figure 1); and 4. Harvesting must not occur within 20 m from the open coast as measured from the toe of the nearest natural bank adjoining the sea, or 	<p>Activity status where compliance is not achieved: RDIS Matters over which discretion is restricted:</p> <ol style="list-style-type: none"> (a) The effects of the location and extent of harvesting on landscape values or on ecological, hydrological and geological values of the karst system or feature; and (b) Whether the harvesting activity is setback from riparian and coastal margins; and (c) The location, timing, design and density of soil disturbance and vegetation removal activities and any rehabilitation measures proposed; and (d) Effects on the relationship of mana whenua and their culture and traditions with the site and any

<p>where that is not able to be defined, from the edge of common terrestrial vegetation.</p> <p><i>Note:</i> This rule prevails over the Resource Management (National Environmental Standards for Plantation Forestry) Regulations 2017.</p> <p><i>Note:</i> See the rules in the ecosystems and indigenous biodiversity chapter if the activity is undertaken within a significant natural area.</p>	<p>wāhi tapu or other taonga affected by the activity; and</p> <p>(e) The effects of harvesting in respect of slope stability or exacerbation of any pre-existing deep-seated land instability; and</p> <p>(f) The effects on soil erosion post-harvest; and</p> <p>(g) The extent to which vegetation is retained in order to mitigate the effects of streambank and slope erosion, sedimentation, water quality degradation and loss of indigenous species habitat; and</p> <p>(h) The extent of adverse cumulative effects at a catchment scale on ecological, hydrological and geological values of the karst system or landscape; and</p> <p>(i) The effect of the activity on traffic safety, efficiency and impacts on roading infrastructure; and</p> <p>(j) Measures to avoid, remedy or mitigate damage to riparian vegetation or soil; and</p> <p>(k) Measures to avoid, remedy or mitigate adverse effects of the activity on ecological, hydrological and geological values of the karst system or landscape, including the adverse effects of leaching, flood-borne slash and debris damage.</p>
